

Chamber Dimensions:

48" diameter x 60" deep

Reservoir Capacity: 450 gallons

Options Shown: Chamber bottom with a rotor shaft extension, reservoir agitator, working platform with stairway and handrails.

This floor-mounted system is typical of units Imprex has furnished to the motor service shop industry for many years. This particular system does not have a cooling jacket, chiller or a vacuum reservoir, yet it has been successfully applying an epoxy resin with no shelf-life problems. This example of a customer utilizing an epoxy resin in a system without the options traditionally associated with its use serves as a good example of how Imprex considers impregnation medium and geographic location in designing a system tailored to customer needs. This has, in many instances, provided considerable savings.
